# FIRST LET'S MAKE THINGS THAT LAST.

## **OUR HERITAGE**

In 1944 Emeco was asked to make lightweight, non-corrosive, fire resistant and torpedo proof chairs. The classic 1006 Navy Chair was born, and served duty on American Navy submarines and battleships. Today we work with the world's best designers to create chairs that live up to the handcrafting, Made-In-America standards that we inherited from our founders.

## **OUR RESPONSIBILITY**

For Emeco, design is not only the shape of the product. Our engineers and craftsmen explore and create new materials using waste and environmentally intelligent solutions. We build chairs that are so strong that they are passed down through generations – that's how we define 'sustainability.'

## **OUR MANIFESTO**

At Emeco we build products that last, make the best possible choices for our planet and inspire others to do so, collaborate with the world's best, trust in simplicity and know that our heritage is our future. And, we always ask – How can we make a difference?

# PLAIN

OR SU IN JAPANESE

Opposite page: SU small stool with recycled polyethylene seat in charcoal grey and black anodized aluminum legs.

## **SU by NENDO**

With the invisible values of design, engineering and strength, the Emeco SU Collection follows the Japanese aesthetic of 'su' — meaning plain or unadorned — the idea that simplicity is not only modest, but could possibly be more appealing than luxury. SU Stools embody Emeco bones, both in form and choice of materials. SU has the iconic seat of Emeco chairs made since 1944, and is made of reclaimed and recycled materials discovered through our ongoing exploration of eco-conscious resources.

SU seats come in three new material choices, all of which demonstrate a more environmentally conscious way of doing things, using responsibly selected alternatives of some traditional materials.

The Solid Reclaimed Oak seat is sourced from old architecture in the U.S.A., and carved into the Emeco seat by Amish craftsmen in Pennsylvania. Every piece is unique with signs of its past life.

The Eco-Concrete seat is made of Green-Concrete, a revolutionary concept that can replace the energy-consuming traditional concrete used in architecture. Emeco's Eco-Concrete SU seat consists of 50% recycled glass bottles and CSA (calcium sulfoaluminate cement) that takes much less energy to make.

The Recycled Polyethylene seat, made of 75% post-industrial and 25% post-consumer content, and shaped into the SU seat through rotation molding, comes in three timeless color options – red, flint gray and dark charcoal gray.

Emeco's traditional material, recycled aluminum is used to make SU legs with either natural or black anodized finish. Reclaimed Oak, as used in the seat, is another choice for the legs.

Su small stool, counter stool and bar stool with recycled polyethylene seat in flint grey, charcoal and red and natural anodized aluminum legs.
